3. Design a web page using CSS (Cascading Style Sheets) which includes the following: a) Use different font, styles: In the style definition you define how each selector should work (font, color etc.). Then, in the body of your pages, you refer to these selectors to activate the styles. b) Set a background image for both the page and single elements on the page. c) Control the repetition of the image with the background-repeat property.	
4. To create a html page to show online exam using JavaScript.	**CO2**
5. Validate the registration, user login, user profile and payment by credit card pages using JavaScript.	**CO2**

Display the XML file as follows. b) The contents should be displayed in a table. The header of the table should be in color GREY. And the Author names column should be displayed in one color and should be capitalized and in bold. Use your own colors for remaining columns. c) Write XML schema and XSL for the XML file.	**CO2**
