Labyrinth 2.0” an Idea contest

Date : 18.04.2020 to 25.04.2020
 Venue : Online
 Nature of Programme : An Idea Contest
 Organizer: IEEE Office bearers
Objective: To focus the technical prowess and R&D skills of individuals with the influx of new technologies like artificial intelligence, machine learning, bots, etc. that are still not a part of the educational curriculum, to provide the platform for people interested in these new-age technologies to demonstrate their talent and get a chance to work on them.
Outcome: From the several number of team registration, shortlisted 15 teams. Among the 15 teams further selected three teams based on the technology and the feasibility. This event provides a platform for the student think innovate.

Adobe Photoshop event

Date : 30.04.2020
 Venue : Online
 Nature of Event : Editing pictures
 Organizer : IEEE Office bearer
Objective: To focus on the ability of the students to perform editing in the pictures by morphing of pictures with their creative ideas by including number of effects like color splash, double exposure, etc.
Outcome: More than 100 participants from various colleges across India, have registered and participated in this event. The topic given was “HOPE” which is an expected feeling by every citizen being in quarantine. We identified three best designer and honored with certificates

However, integration is not a trivial feature when dealing with a variety of electronic systems and healthcare components. This project aims at explaining in detail the technology drivers behind the IoT and health care with the information on system architecture, system implementation, workflow or the process flow behind the technical operations of the remote device coordination, the architecture of the network, middleware, databases, application services. With the rapid development of the mobile Internet, Internet of Things (IoT), and wearable devices, health monitoring has shown an intelligent trend in recent years. In this regard, a novel key generation algorithm has been proposed in this paper using channel response technique, where the data hops from one channel to another in its transit from the source node to the destination node securing it from attacks. The Leap and Stop algorithm has been applied for channel hopping thus ensuring that the data traverses only for a small duration in each channel before hopping to the other channel. The channel hopping technique minimizes the probability of attack since before an active channel could be successfully predicted by the attacker, it becomes inactive and another channel gets activated. This channel hopping process continues till data reaches the destination safely without getting corrupted. The proposed approach had been compared for its efficiency and performance with Secure Key Generation using Frequency Selective Channels (SKGFSC) protocol and the results had been shown therewith.</p>

CTS CUB ACTIVITIES

Our College have been ranked **Second place** in the list of Best performing Colleges

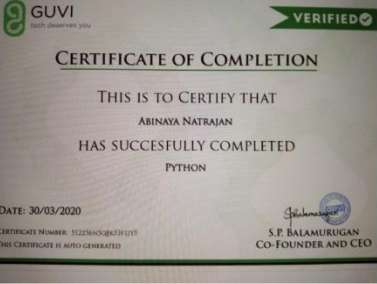

III year IT student **Nivethitha.M** have been crowned as **best mentor of this month** for her overwhelming responses for all tasks and for her coordination with the students during lockdown

About 15 students from IT department involved in all 23 events like Usecase Design Contest, Leveraging Online Tools, Web Page Designing, Complete The Statement to get the Output, Code Combat, Remote Project Development, etc.
